Problem Statement

Notes Sharing Web Application (FSWD)

<https://github.com/codecomputer coder/Note-Sharing-App>

Abstract

The project aims to develop a comprehensive Notes Sharing App tailored specifically for academicians, leveraging the powerful Spring Boot framework for web development. This application seeks to address the challenges faced by academicians in accessing, organizing, and sharing educational materials and research resources efficiently.

Project Overview

- **A Teacher can upload files/notes and also can see already available documents in the notes/files library.**
- **A Student can download the notes/files according to their need .**
- **During registration a user has to select his/her role with other credentials .**
- **After login the user will directly moved to the teacher or student page according to their role.**

Proposed Solution

- Used JWT role based authentication to give only the authenticated users to access the Apis.
- Permission to only the teacher to upload files and both the teacher and student to download available files.
- *POST /registration* – register a user
- *POST /genToken* – login and get jwt token
- *GET /files* – show available files in library
- *GET /files/{id}* – download a particular file
- *POST /uploadsinglefile* – upload a file
- *index.html*– registration page
- *Login.html*– login page
- *admin.html* – teacher page
- *user.html*– student page

Technology used

- Spring boot for Backend
- HTML, CSS, Bootstrap and JavaScript for Frontend

Conclusion

The Notes Sharing App, designed for academicians, streamlines access to educational resources by allowing teachers to upload materials and students to download them. Role-based registration ensures seamless navigation, directing users to either the teacher or student page upon login, while leveraging Spring Boot framework for efficient development and user-friendly interface.

Thank you!
